

## PRODUCT: MGVC (Modulating Gas Valve Control)

---

### PROBLEM:

A gas burner manufacturer had developed a means of employing a modulating gas valve and custom burner in an application for dramatic gas savings in restaurants. However no off-the-shelf control was available to accommodate all the inputs, outputs and operational control needed to make it commercially viable.

### ELAN SOLUTION:

Elan designed a control that fit the 'black box' requirement defined by the burner company.

### RESULTS:

Elan's control has enabled the OEM to land new customers and demonstrate promised gas savings at end customers.
