

Elan Custom Control

COMMERCIAL HOT DOG ROLLER GRILL CONTROL

CONTROL INFORMATION

Elan designed and supplies a high performance hot dog roller grill control for a commercial client.

As background, to reheat a frozen hot dog requires a higher temperature to achieve the fastest cooking time. But once temperature is reached, a lower temperature is desired to hold the product as long as possible without drying it out. Cook and Hold operation provided the best method to heat the food properly and quickly while reducing scrapped product.

Elan's control implemented a number of unique features to optimize performance including programmable Cook & Hold operation, Triac outputs for long life, multiple probe inputs for high temperature accuracy, and intuitive keys (with menu features) to make operation as easy as possible for the user.

In addition, a 3rd output on the device controls an adjacent bun warmer device.

NOTE:

This product was developed by Elan for a specific OEM customer. It is not available for sale.

The information above is intended to show Elan's control design and manufacturing capabilities. It is not a complete specification of the control or features included.
