

## Elan Custom Control

## RESIDENTIAL ICE MAKER OPTICS BOARD

### CONTROL INFORMATION

Elan designed and supplies an ice maker optics board for an appliance aftermarket parts firm.

Many new side-by-side refrigerators include ice storage in the door; the door location prevents the use of the old 'ice bar' method of detecting ice. Instead, these new units use optical IR sensor and receiver, mounted across the top of the ice storage, to determine if the storage is full and inhibit ice making.

Elan's design was done for a specific aftermarket parts firm to fit the footprint, optics alignment and operation of the original part. In addition, Elan designed and supplies the custom packaging and supplies the control pre-packaged (including instructions) to our customer.

#### **NOTE:**

This product was developed by Elan for a specific OEM customer. It is not available for sale.

The information above is intended to show Elan's control design and manufacturing capabilities. It is not a complete specification of the control or features included.
