

Elan Custom Control

RESIDENTIAL OVEN ELECTRONIC CONTROL PLATFORM

CONTROL INFORMATION

Elan designed, and supplies, a comprehensive oven control system for a high-end residential appliance OEM.

The product was an evolutionary step in control scenario from the original product-specific controls utilized. The control platform now consists of:

- A flexible main control board
- Multiple user interfaces ranging from basic 'mechanical' selectors up to electronic TOD (time of day) clocks and high end display modules
- A series of different power supplies suitable to operate the different devices, including low current draw switching supplies for low-power regulations
- UL & CE ratings for worldwide usage

Elan's control platform provides a number of advantages in combining volume, reducing SKU's, etc. The OEM can now also create new product, with new user interfaces, tremendously faster than previously as they simply connect to controls and power supplies already in production.

Further, their exceptional cooking performance, a hallmark of this high end OEM, is consistent across their product line, without having to re-design this aspect with every new unit.

NOTE:

This product was developed by Elan for a specific OEM customer. It is not available for sale.

The information above is intended to show Elan's control design and manufacturing capabilities. It is not a complete specification of the control or features included.
