

Elan Custom Control**eSTAT30SBD ELECTRONIC THERMOSTAT with display****CONTROL INFORMATION**

The eSTAT30SBD is an electronic thermostat with display designed specifically for an OEM customer in commercial cooking.

The customer began using a knob-based control supplied by Elan, tailored in software to suit their needs. The results were excellent; the control improved the temperature performance of the end devices as well as reducing field service issues present with previous mechanical thermostats.

However, the knob mechanicals added cost to the control and as they transitioned their customer-base to 'electronic' offerings, tactile key entry was considered acceptable for much of their product line.

Elan designed a new control, maintaining the operational functionality of the original but at a lower cost, with key entry only. The control was designed for, and passed, both UL and CE. A DIP-switch model selection allows the eSTAT30SBD to serve in multiple applications and it has become the 'standard' control used by the OEM.

NOTE:

This product was developed by Elan for a specific OEM customer. It is not available for sale.

The information above is intended to show Elan's control design and manufacturing capabilities. It is not a complete specification of the control or features included.
